

MSJ74 4

$F = 1000$, $C = 6\%$, $T = 5 \text{ yrs.}$, $\text{YTM} = 5\%$.

$$P_{T=0} = \frac{60}{1.05} + \frac{60}{1.05^2} + \frac{60}{1.05^3} + \frac{60}{1.05^4} + \frac{1060}{1.05^5} = 1043.30$$

$$P_{T=1} = \frac{60}{1.05} + \frac{60}{1.05^2} + \frac{60}{1.05^3} + \frac{1060}{1.05^4} = 1035.46$$

$$P_{T=2} = \frac{60}{1.05} + \frac{60}{1.05^2} + \frac{1060}{1.05^3} = 1027.23$$

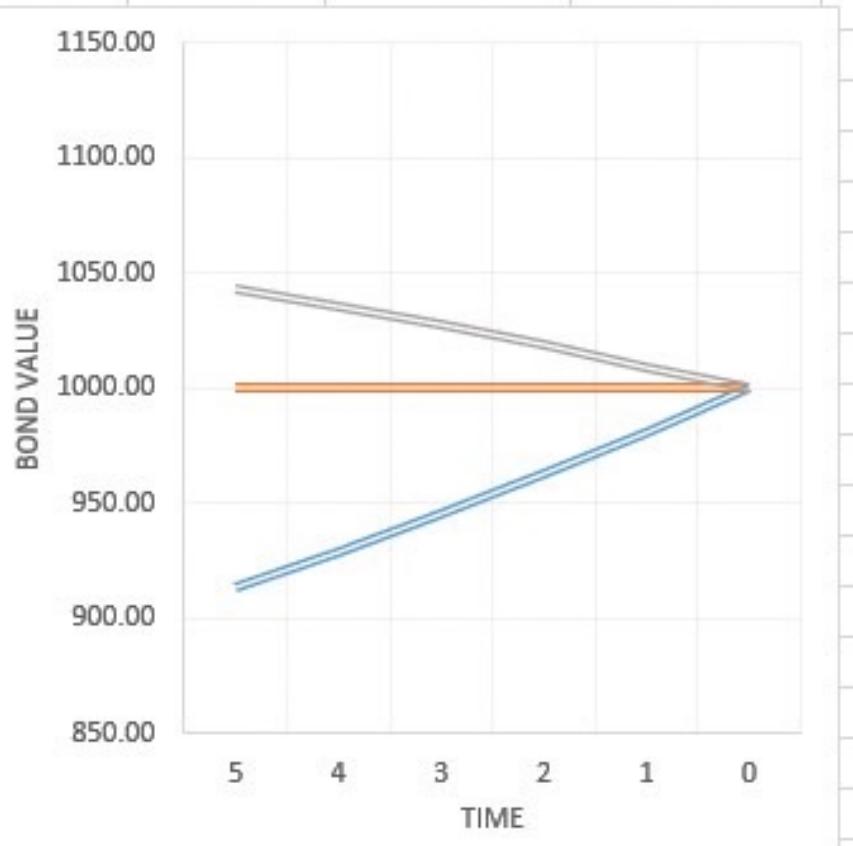

$$P_{T=3} = \frac{60}{1.05} + \frac{1060}{1.05^2} = 1018.59$$

$$P_{T=4} = \frac{1060}{1.05} = 1009.52$$

$$P_{T=5} = 1000$$

ANSWER 5

Time to maturity	Coupoun Rate		
	3%	5%	6%
5	913.41	1000.00	1043.29
4	929.08	1000.00	1035.46
3	945.54	1000.00	1027.23
2	962.81	1000.00	1018.59
1	980.95	1000.00	1009.52
0	1000.00	1000.00	1000.00

MS2JU 6

1) $F = 1000$, $C = 3\%$, $T = 5$ yrs, $YTM = 6\%$

$$P = \frac{30}{1.06} + \frac{30}{1.06^2} + \frac{30}{1.06^3} + \frac{30}{1.06^4} + \frac{1030}{1.06^5}$$

$$\Rightarrow 793.44$$

2) $F = 1000$, $C = 3\%$, $T = 20$ yrs, $YTM = 6\%$

$$P = \frac{30}{1.06} + \frac{30}{1.06^2} + \frac{30}{1.06^3} + \dots + \frac{30}{1.06^{19}} + \frac{1030}{1.06^{20}}$$

$$\Rightarrow 655.90 \text{ un}$$

ANSWER 7

Macaulay Duration (Mac Dur) vs Modified Duration (Mod Dur)

Initial $C = 5\%$, $t = 4$, $YTM = 5\%$ semi-annual payment $\rightarrow C = 2.5\%$, $n_t = 8$, $YTM = \frac{5\%}{2} = 2.5\%$

$$C_1 = 25 \quad PV_1 = \frac{25}{1.025} = 24.39 \quad W = \frac{24.39}{1000} = 0.02439$$

$$C_2 = 25 \quad PV_2 = \frac{25}{1.025^2} = 25.80 \quad W = \frac{25.80}{1000} = 0.02580$$

$$C_3 = 25 \quad PV_3 = \frac{25}{1.025^3} = 23.21 \quad W = \frac{23.21}{1000} = 0.02321$$

$$C_4 = 25 \quad PV_4 = \frac{25}{1.025^4} = 22.65 \quad W = \frac{22.65}{1000} = 0.02265$$

$$C_5 = 25 \quad PV_5 = \frac{25}{1.025^5} = 22.10 \quad W = \frac{22.10}{1000} = 0.02210$$

$$C_6 = 25 \quad PV_6 = \frac{25}{1.025^6} = 21.56 \quad W = \frac{21.56}{1000} = 0.02156$$

$$C_7 = 25 \quad PV_7 = \frac{25}{1.025^7} = 21.03 \quad W = \frac{21.03}{1000} = 0.02103$$

$$C_8 = 25 \quad PV_8 = \frac{1025}{1.025^8} = \frac{841.27}{1000} = 0.84127$$

$$\text{MacDur} = 0.02439(1) + 0.02580(2) + 0.02321(3) + 0.02265(4) + 0.02210(5) \\ + 0.02156(6) + 0.02103(7) + 0.84127(8)$$

$$\approx 7.3494$$

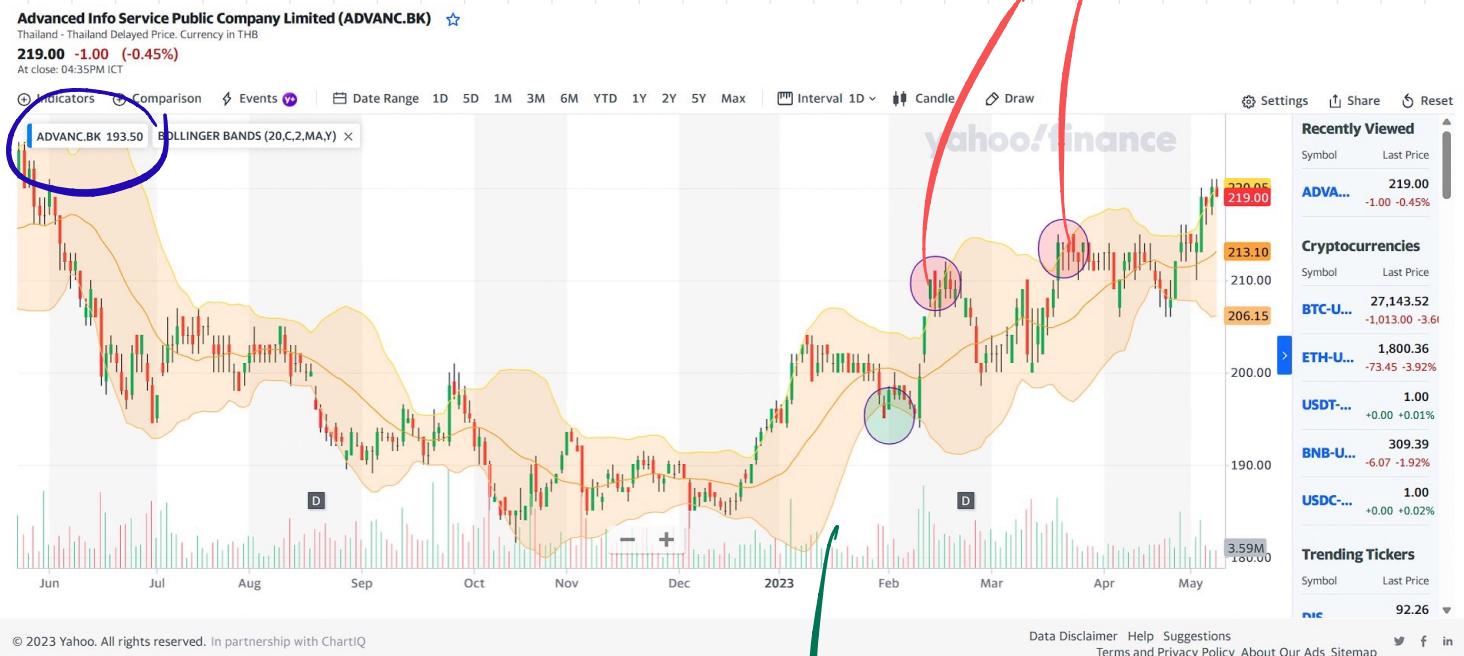

$$\text{Mod Dur} = \frac{7.3494}{(1 + \frac{0.05}{2})}$$

$$\approx 7.17\%$$
